

WALDPORT TSP UPDATE FACT SHEET

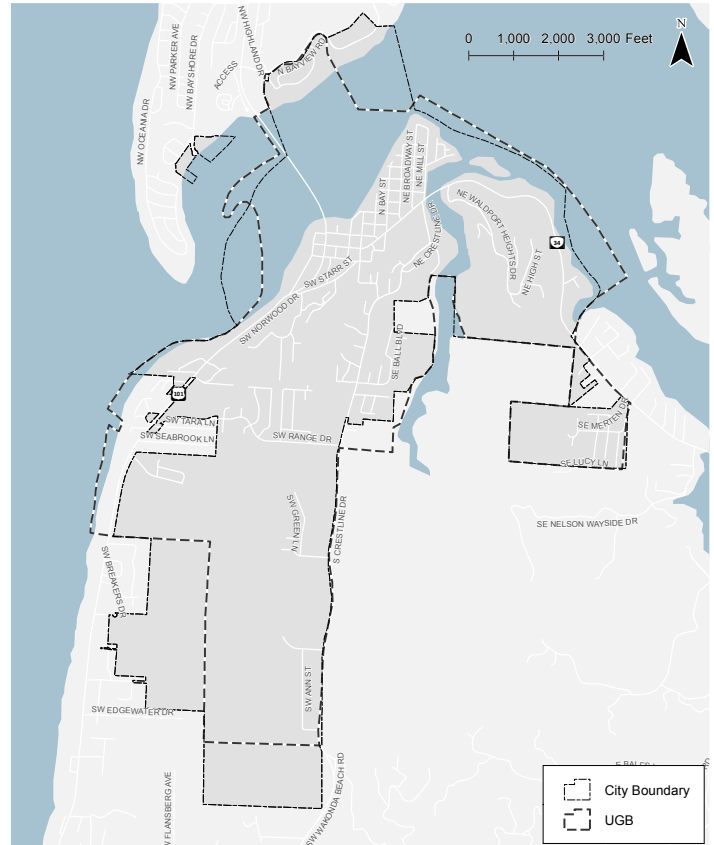

WHAT

This project will update the City of Waldport Transportation System Plan (TSP), which is a long-range plan that identifies the transportation facilities and services needed to address existing deficiencies and support growth in the city over the next 20 years.

WHY

The current TSP was adopted in 1999. Since that time several changes have occurred in the City that need to be addressed for residents and visitors and corrected for future growth and development. These include the following:

- » The 1999 TSP needs to be updated to include a new 20-year planning horizon, including revised population and employment projections.
- » The planned and funded transportation project lists need to be revised to coincide with the new 20-year planning horizon, to remove projects that are complete or no longer needed, and to add new projects.
- » Funding options need to be developed for new transportation projects planned for the next 20 years.
- » Bicycle, pedestrian, and transit elements are limited in scope in the 1999 TSP and need additional work to make the updated TSP a true multimodal plan.
- » The downtown/Highway 101 area of the City needs to be investigated in regard to multimodal connections to the Port of Alsea and upgrading the on- and off-street parking system.
- » Additional tsunami evacuation routes need to be investigated to help save lives during tsunami events.
- » The TSP needs to include details on how the Waldport Industrial Park should be accessed, including the possibility of a new road connection to the area since the existing access roads are narrow and curved.
- » The 1999 TSP needs to be updated so it is consistent with applicable laws and adopted plans including several state, regional, and local plans.
